```
@Component({
  selector: 'outer',
  template: `
    <div>
        <p A> ... </p>
    </div>
  `,
  providers: [ MyService ]
})
export class OuterComponent {}
```

```
@Directive({
  selector: '[A]',
})
export class ADirective {

  constructor(@Host() s: MyService) {}
}
```

```
@Directive({
  selector: '[A]',
})
export class ADirective {

  constructor(@Host() s: MyService) {}
}
```

Errore!

```
@Component({
  selector: 'outer',
  template: `
    <div>
        <p A> ... </p>
    </div>
  `,
  providers: [ MyService ]
})
export class OuterComponent {}
```

MyService è nell'injector dell'host, Host() non arriva qui!

```
@Directive({
  selector: '[A]',
})
export class ADirective {

  constructor(@Host() s: MyService) {}
}
```

Ok!

```
@Component({
  selector: 'outer',
  template: `
    <div>
        <p A> ... </p>
    </div>
  `,
  viewProviders: [ MyService ]
})
export class OuterComponent {}
```
