

Form nidificati - Reactive forms

Gestione degli errori: dall'esterno

```
this.form = new FormGroup({  
    customer: new FormControl({}, customerValidator),  
    address: new FormControl({}, addressValidator),  
    payment: new FormControl({}, paymentValidator)  
})
```

[ControlValueAccessor](#)

Gestione degli errori: auto-validazione

```
@Component({
  ...
  providers: [
    { provide: NG_VALUE_ACCESSOR, useExisting: MyComponent, multi: true },
    { provide: NG_VALIDATORS, useExisting: MyComponent, multi: true }
  ]
})
export class MyComponent implements ControlValueAccessor, Validator {

  validate(control: AbstractControl) {
    return { ... } || null;
  }
}
```
