

Parameter Decorators

- `Optional`
- `Self`
- `SkipSelf`
- `Host`
- `Inject`

“They alter the way the DI framework provides a dependency, by annotating the dependency parameter on the constructor of the class that requires the dependency.”

@Self

```
constructor(@Self() auth: AuthService) {}
```

Passami un'istanza di
AuthService, ma cerca solo
nel mio Injector!

@Self()
